Snehil Patel

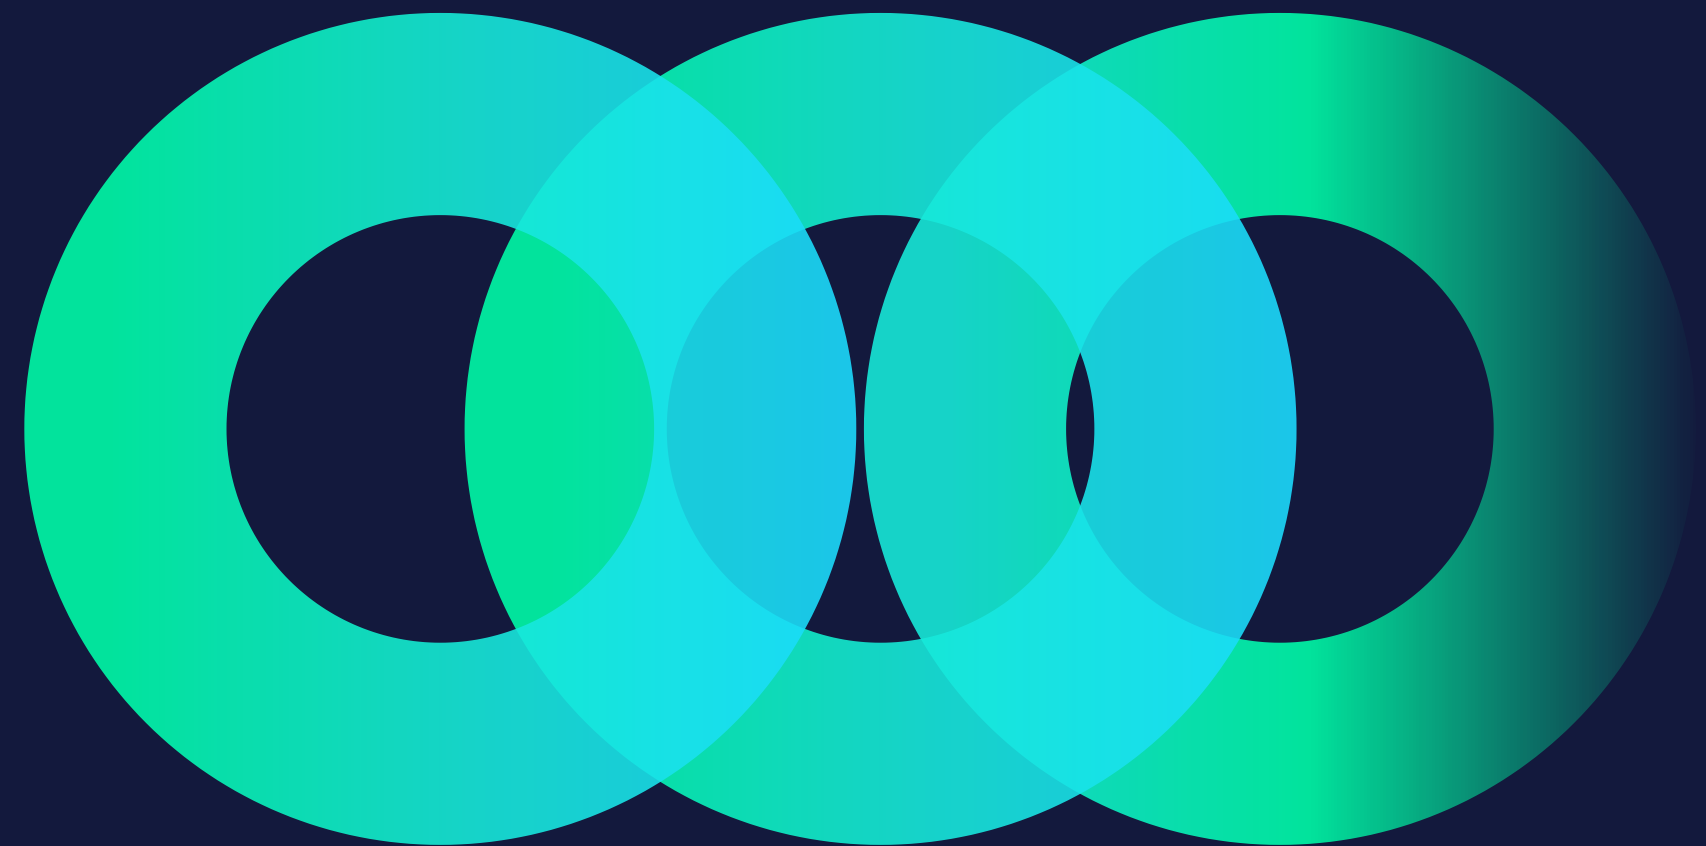

Let's Start

DPhone corporation is telecommunications industry wants to develop software for there new upcoming phone. They came to your company. You as team member have responsibility to develop this standalone application. They having following requirements.

1. User can register and login
2. User can give referral for phone from their family or friends.
3. User can view referral, edit referral, delete referral.

Problem Statement

In this you as team member have to design database.

Create following tables:

User(userId,first name,last name, address, mobile, email, username, password)

Referral(referralId, referral First name, referral last name, mobile, email, userId(fk), date of referral, referral points, status)

Customer(customerId, first name, last name, email, mobile)

BuyingDetails(customerId(fk),userId,purchase date, productName)

Insert 5 records in each table and write Sqlqueries for following operations.

1. Display total number of referral done by particular user by userId.
2. Display total number of points earned by user
3. Display name and mobile of user whose referral customer have purchased item on 21/09/2022
- 4.Display details of customer who purchased "iPhone 14"
- 5.delete all record of customer including purchase details Those have purchased iPhone 14.

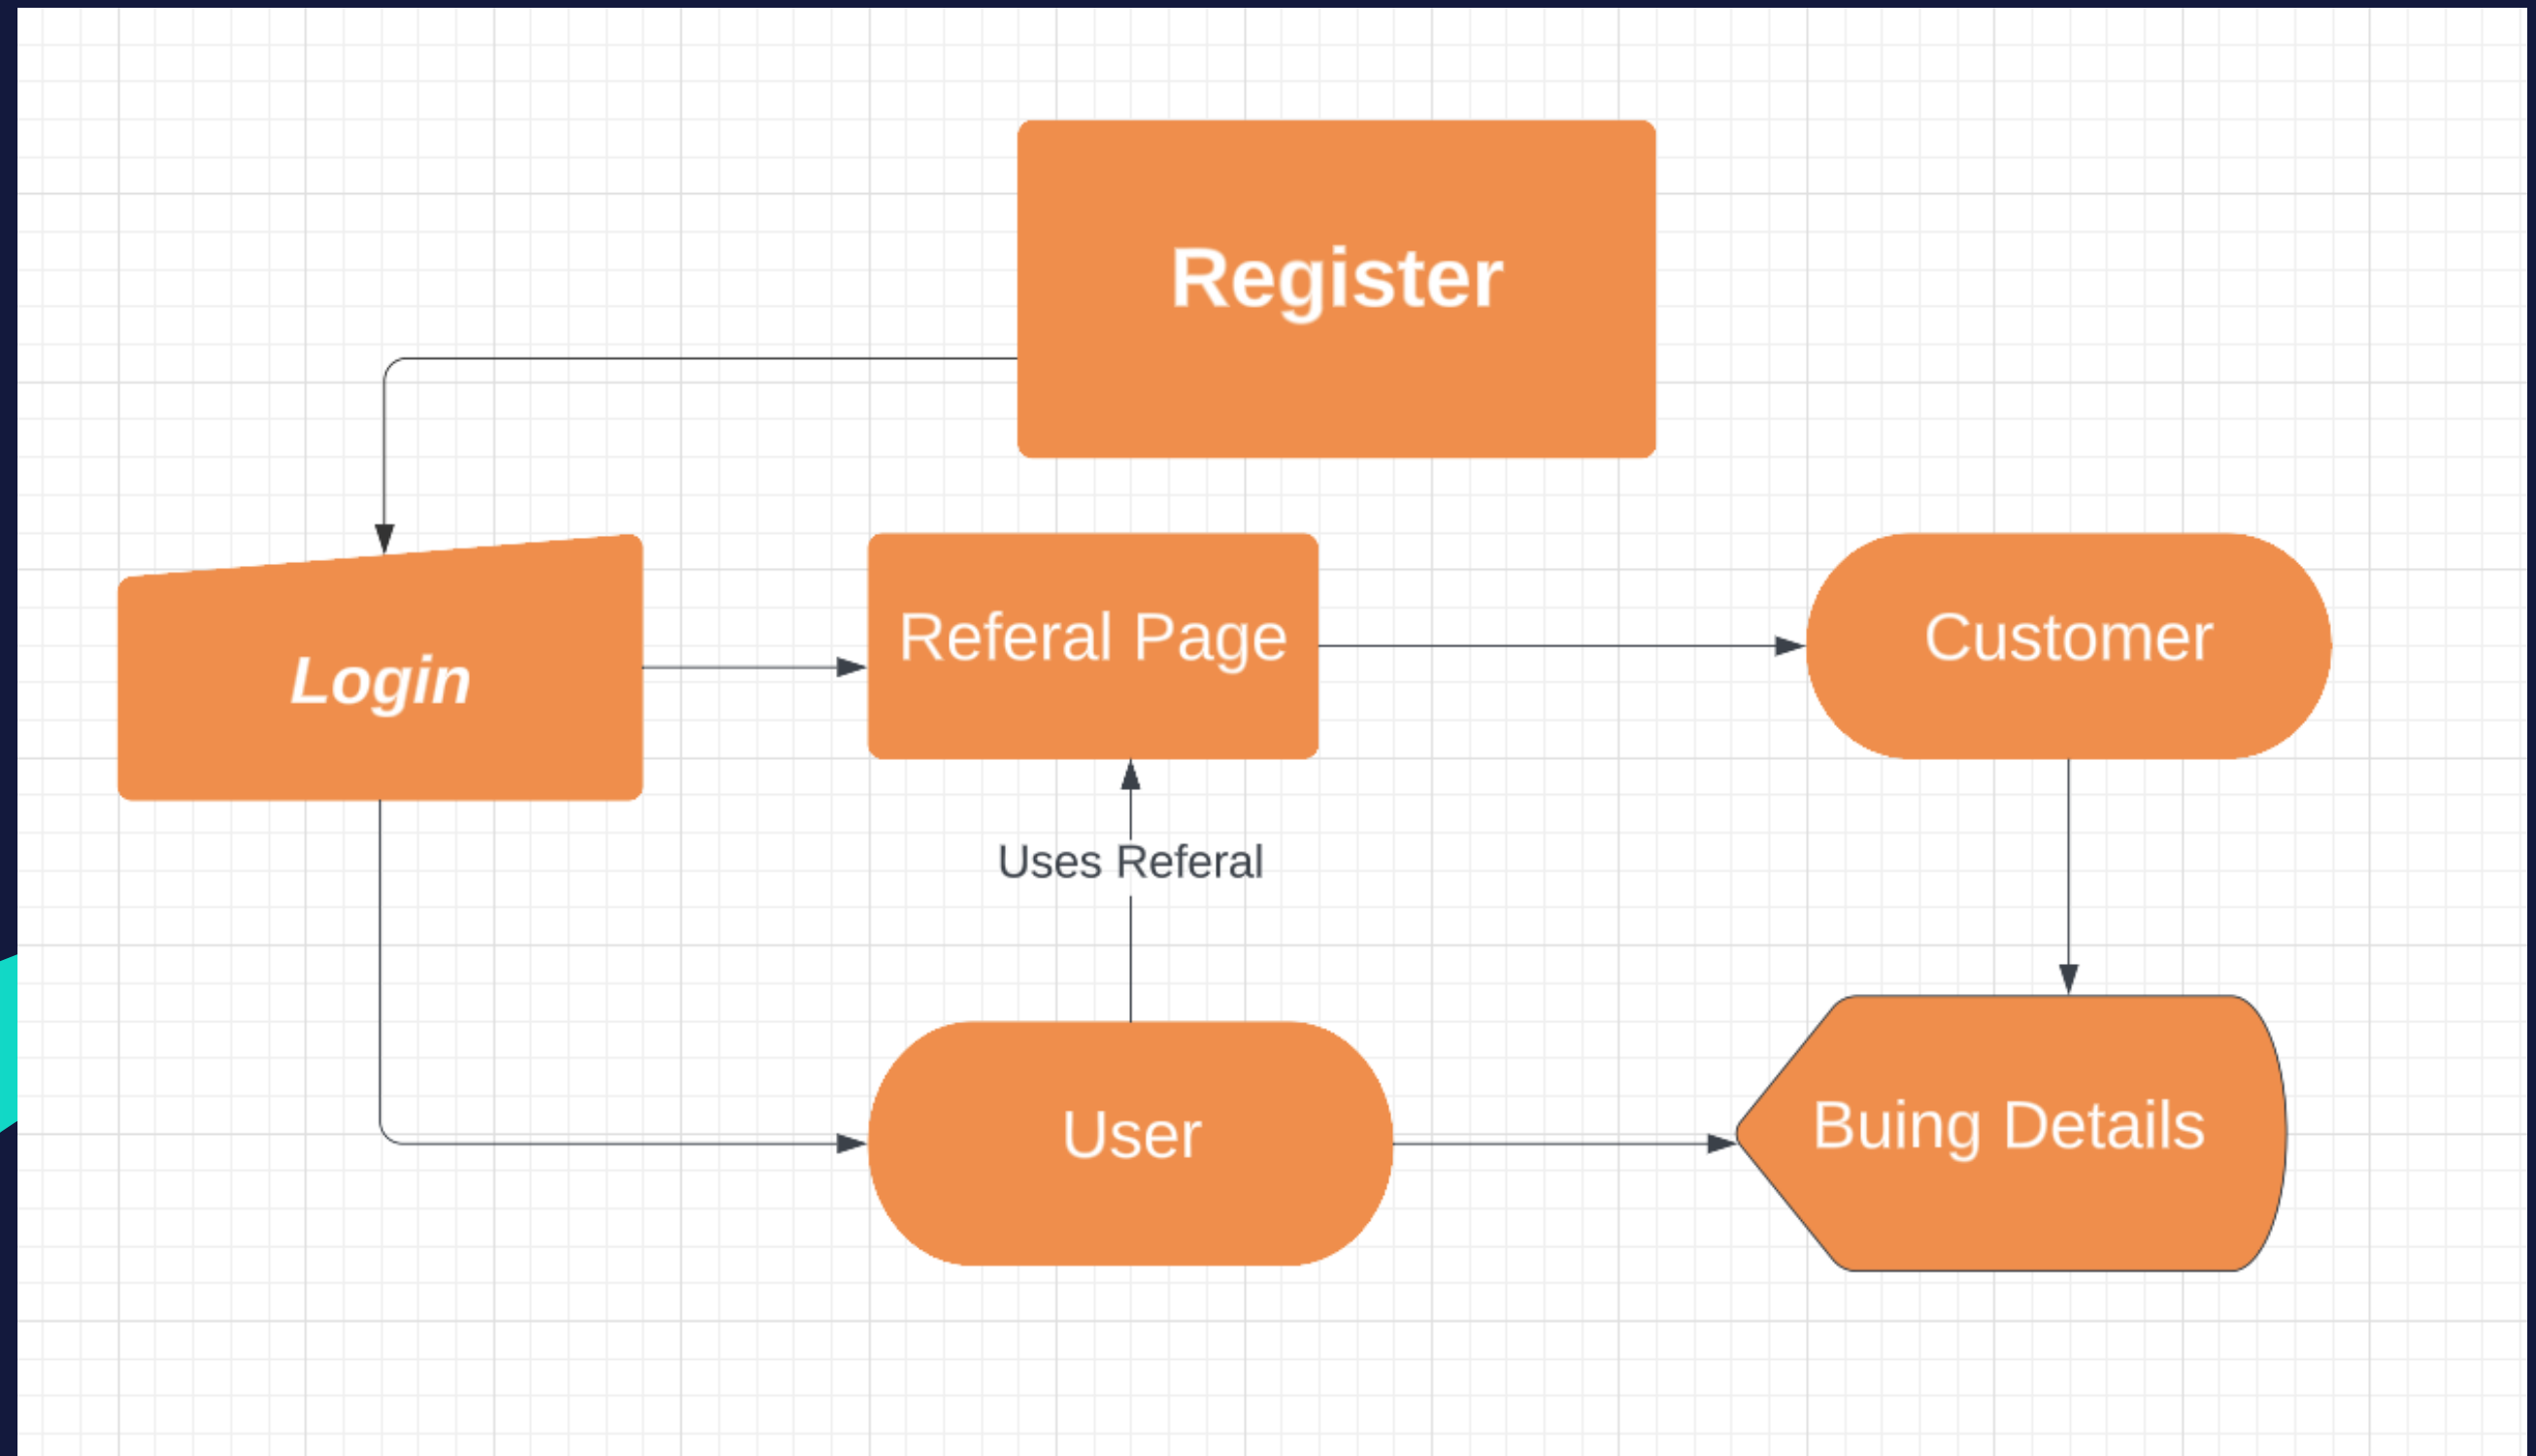

Write userview to display only first name, last name, mobile and email. And
Perform following queries on view

- Display record by email
- Display record by mobile
